A paragraph is a series of sentences that are organized and coherent, and are all related to a single topic. Almost every piece of writing you do that is longer than a few sentences should be organized into paragraphs. This is because paragraphs show a reader where the subdivisions of an essay begin and end, and thus help the reader see the organization of the essay and grasp its main points.

Paragraphs can contain many different kinds of information. A paragraph could contain a series of brief examples or a single long illustration of a general point.

It might describe a place, character, or process; narrate a series of events; compare or contrast two or more things; classify items into categories; or describe causes and effects. Regardless of the kind of information they contain, all paragraphs share certain characteristics. One of the most important of these is a topic sentence.

Bachelor's in Technology

(BTech)

is a four-year undergraduate program that is pursued by millions of science stream students every year. The UG level degree offers specializations in various disciplines like mechanical, civil, electronics, software, etc. On average around 1.5 million students graduate as engineers with BTech degrees in the country.
Such a high number of students graduating in the BTech courses is creating uncertainty in the minds of aspiring students about choosing this mainstream career. The answer to the question Why choose BTech? - lies in the statistics that even though 1.5 million students graduate as engineers, there is a requirement of around 4 million engineers in India.
